2004 VUE 2.2L
2007 ION-3 Sedan

1 Saturn OEM Part Numbers for Commonly Replaced Items on S-Series Cars

21025106 Coolant temperature sensor for all 1991 to 2002 (for use in the lower port of all 1991 to 2002 cylinder heads). This sends information to the computer for things like adjusting the gasoline and air ratio, helping decide whether to turn or off the radiator fan, etc. This is not only the temperature sensor for the coolant but also for the air and for the transmission. This has a connector for a double wire harness.

21020124 Coolant temperature sensor for 1991 to 1995 only (for use in the upper port of 1991 to 1995 cylinder heads). This sends information to the temperature gauge on the dashboard. This has a connector for a single wire harness.

21006065 Thermostat and thermostat housing with the thermostat already installed in the housing. We can buy the thermostat separately and reuse the thermostat housing - I think it comes with a tool for removing the old thermostat from the housing and for installing the new thermostat into the housing. This comes with a new gasket too.

25147308 PCV valve.

21012185 Torque axis mount, a.k.a. the upper motor mount. The following are optional when replacing the mount:

- 1151885 Stud (3 of them).
- 21006320 Nut (5 of them).

21012880 Front Vented Brake Rotor.
21012665 Rear Disc Brake Rotor (not for use with rear drum brakes).

If I made any mistakes then please post them to this thread. Also feel free to add more common OEM Saturn part numbers. Thanks.
